Professional Profile

Motivated Systems Engineering student and Junior Fullstack Developer with practical experience in IT support, software development, and systems administration. Proven track record of optimizing internal workflows, maintaining network uptime, and building responsive web solutions. Passionate about clean code, accessibility, and solving complex algorithmic problems.

Technicals Skills

- **Programming Languages:** Python, JavaScript, PHP, C, C++.
- **Web Technologies:** HTML5, CSS3, Astro, Angular, Responsive Design, Web Accessibility.
- **Tools & Frameworks:** Git, GitHub, Linux CLI, SQL/NoSQL Databases, Network Protocols (OAI-PMH), Data Modeling, Audio Editing Software.
- **Languages:** Native Spanish, Intermediate English (B1), Basic Portuguese(A2).
- **Soft Skills:** Technical Writing, Problem Solving, Cross-functional Teamwork, Technical Presentations.

Projects

Automated Certificate Verification System | *PHP & Web Ecosystem (April 2025)*

- Designed and developed a secure, production-ready web application to authenticate institutional certificates via dynamic QR code scanning and user ID queries.
- Implemented dual-verification logic: a mobile-optimized routing system via QR codes for instant validation, and a centralized search portal allowing users to query valid certification records using national ID numbers.
- Engineered efficient backend queries to filter and aggregate database records, improving system trust and reducing manual verification requests by replacing physical document checks.

2D Retro Platformer Game (Videogame Project) | *In Progress (June 2026)*

- Designing and developing a 2D side-scrolling platformer inspired by classic mechanics (Super Mario Bros) featuring dual-character switching logic (cat and dog).
- Implementing custom physics, collision detection algorithms, state machines for character animations, and responsive input controls using [Menciona tu framework aquí].

- Managing project milestones and version control via GitHub to meet a strict 5-week development roadmap.

Remote Physics Robot (IoT Project) | **CoAfina Hackathon** | *November 2025*

- Collaborated in a multidisciplinary team to design and develop a remote-controlled physics robot intended for remote laboratory experimentation.
- Contributed to the system architecture and repository management, ensuring clean version control and modular code structure.
- Developed the branding identity and technical presentation materials for the project pitch under tight hackathon deadlines.

Professional Experience

UNIVERSIDAD DE LOS ANDES - DTES, Mérida, Venezuela
IT Support Assistant (Telecommunications and Services Department) | November 2024 – Present

- **System Migration & Infrastructure:** Co-led the technical database and system migration of the university's Institutional Repository from legacy architectures (DSpace 6.x) to modern enterprise standards (DSpace 9.x/REST API), ensuring metadata integrity and service continuity under confidentiality guidelines.
- **Systems Administration:** Administer and maintain core information systems, Linux servers, networks, and web services to guarantee high availability and over 99% uptime across university departments.
- **Workflow Automation:** Design and deploy specialized backend solutions and shell scripts tailored to optimize internal services and automate administrative data workflows.
- **Technical Support:** Provide advanced technical troubleshooting, systems deployment training, and infrastructure support for cross-functional teams and end-users.

TÍA NICOTA C.A., Mérida, Venezuela
Inventory Management & Customer Service Operations | June 2018 – October 2022

- Optimized inventory control and stock replenishment systems in a fast-paced environment to minimize waste and ensure consistent supply chains.
- Developed strong time-management, multitasking, and crisis-resolution skills while collaborating with cross-functional teams under pressure.

ULA 107.7 FM, Mérida, Venezuela
Audio Operator & Content Producer | July 2017 – September 2017

- Managed live broadcast transmission equipment and monitored signal levels to ensure high-quality audio output.

- Utilized specialized audio editing software to produce, cut, and mix media content under tight broadcasting schedules.

Education & Credentials

UNIVERSIDAD DE LOS ANDES (ULA), MÉRIDA, VENEZUELA

SYSTEMS ENGINEERING (IN PROGRESS), 2020 – PRESENT

- **Relevant Coursework & Core Skills:** Advanced Algorithms, Numerical & Data Analysis, Operations Research, Object-Oriented Programming, Database Management Systems.
- **Activities:** Led initiatives to improve student experience and collaborated in academic and technical student events.

U.E. COLEGIO NUESTRA SEÑORA DE FÁTIMA, MÉRIDA, VENEZUELA

BACHELOR OF SCIENCE, JULY 2017
